THESE ARE THE "G" HYBRIDS ADAPTED TO MICHIGAN

G-29

A truly great hybrid for the better soils of Southern Michigan. It is especially recommended for the South Western counties where hybrids of slightly later maturity give the best yields. Wayne, Jackson and Van Buren counties are its northern limits of safe usage except for silage. G-29 has excellent stalk quality.

It has a long, deep-kerneled, cylindrical ear which makes friends with live stock feeders everywhere.

G-114

Similar in maturity to G-29, it is a full-season corn for Southern Michigan. G-114 is a great favorite with mechanical picker operators because of its usual stalk quality. The stalk stays green while the ear ripens.

G-114 is a great yielder and is best suited to good fertility levels.

G-12

Just a little earlier than G-114 and G-29, this hybrid has an excellent record from the Port Huron area on the East to Holland on the West. Beautiful stalk quality and with ears that hang to the stalk, this hybrid is well-adapted to all soil types. Plant height is medium and excellent for husking or shocking.

G-7

This medium early hybrid has given most excellent performance in South Central Michigan for years and it has a host of friends on the better soils of the Saginaw and "Thumb" areas where full season hybrids give the better yields.

G-7 is a great silage hybrid in the North Central area because it grows a little taller than most early hybrids.

G-6

This hybrid, formerly called G-176, is a new-comer on our list for Michigan. It is early enough for the North Central Michigan area and just right for the "Thumb" counties and yet it yields like later-maturing corn.

Medium early though it is, this hybrid has made a lot of friends in South Central Michigan with those who prefer completely safe maturity range.

G-6 has some white-capped kernels but when shelled it is definitely yellow corn.

G-1

"Never enough to go around," has always been the story on this great medium early corn. Low eared and high-yielding, G-1 is at home in the same territory suggested for G-6. We can truthfully say, that there is no other hybrid like it. Beautiful stalk quality and big yields are not idle boasts. G-1 has what it takes.
